Abstract: Introduction: The aim of this study was to examine the relationship between parenting practices and shyness in high school students.

Method and Material: Methods of correlation. Male and female high school students in the sample city Bookan, and a sample of 40 boys and 40 girls were a cluster randomized selected. to collect data from the Scale of perceived parental practices Robbins (1994) and Shyness Inventory. For data analysis, the Pearson correlation coefficient method was used with SPSS-21 software.

Results: The results showed that there is no significant relationship the between mothers' parenting practices with adolescent shyness, But the father's parenting style is associated with adolescent shyness. No relation was observed between the score mother involvement with adolescent shyness But there is relationship between the involvement of father with adolescent shyness. Also, a significant correlation was found between shyness and mother warmth However, a significant relationship was found between the warm father gingerly.

Conclusion: The results showed that the no relationship the between with mother's parenting style with teenage shyness But there's with father's parenting style. This has to do with psychological interventions focusing on parenting practices can be is a great achievement.
