Background: Identity is the sense of need to separation of other people who have many styles and has a very important role in adolescence. The new ideas of young people in various ways to achieve this important and many factors that affect these components. The aim of this study was to investigate the relationship between Adolescent identity and leisure in 2012

Methods: this analytic-descriptive study of 370 students using a two-stage stratified random sample of public guidance schools were selected in Brigand. Data collected included demographic information, the questionnaire leisure and identity styles questionnaire was identified ISI-6 G. Data were analyzed using chi-square and ANOVA, t-test and correlation analysis

Results: Significant positive relationship was found between informational and diffuse-avoidant identity styles with Space Index, products and internet. Significant negative relationship was observed between Commitment style with internet index

Conclusion: Based on the results, leisure time influence on adolescent identity style. Therefore, families and organizations concerned with Adolescent should supervise Adolescent on leisure activities

Adolescent, identity style, leisure
