### Functional Smile Design

**Abstract:**

"The better the function of anterior teeth, the better will be the smile design.”

During prosthetic rehabilitation of anterior teeth, the ideal goal for a restorative dentist is to turn a patient to normal contour, comfort, function, and specially esthetic of stomatognathic system. In this poster we will describe the steps of customizing the anterior guidance and determining the facial contour and horizontal position of the upper incisal edge. So our patients will have a functional and nice smile.
