**Congress:** 12th International Congress of Iranian Academy of Restorative Dentistry 24-26 October 2012 Tabriz-Iran

**Title:** Ethnic and forensic endodontic-restorative responsibilities of dental treatments

**Authors:**
- Ali Morsali, post graduate student of endodontics, endodontic dpt of Khorasgan Azad University - Isfahan
- Arash Ghodusi, specialist in Forensic medicine, prof assis, Azad University of khorasgan -isfahan
- Masoud Khabiri, Endodontist, prof assis, Azad University khorasgan -isfahan

**Abstract:** Endodontic and restorative treatments are complementary procedures. Coronal seal in endodontic treatments is more important than apical seal. There are situations that we cannot recognize the responsible person for failure of an endodontic-reparative combined treatment from forensic and ethical point of view. In this article through some series of reported cases we try to depict a guideline for this problem.

In all cases the reparative-prosthodontics prognosis is premier to endodontic prognosis. Consultation with a reparative dentist could transform the failure responsibility from endodontist to others. In endodontically treated teeth after a restorative build up, indicating the failure responsible is in some cases difficult. In these cases the “responsible clinician” for treatment should be recognized. The person who have done referring to a clinician providing service under standard of care is, the Responsible clinician. The responsible clinician ethically is responsible for failure of treatment even he/she is a endodontist and the failure etiology is restorative.
